

Environment Policy Statement

Commitment and Principles

TAFE Gippsland is committed to working in partnership with individuals, enterprises, industries and communities to build their competitiveness, growth and success through the knowledge and skills of our students.

TAFE Gippsland is committed to:

- Continuous progress towards ecologically sustainable operations and protection of the environment in our activities, products and services;
- Enhancing the capability of our trainers to deliver skills for sustainability;
- Ensuring that our students have sufficient knowledge to make ecologically sound decisions in their own lives and in their workplaces; and
- Exceeding compliance with environmental regulations and policies.

TAFE Gippsland will meet its commitment to the environment by:

- Raising awareness within and outside the Institute;
- Adopting best practice;
- Role modelling; and
- Providing leadership.

Action will be taken to improve the efficiency of resource use, avoid and prevent the creation of waste, minimise unavoidable waste, promote recycling, reduce energy consumption, reduce harmful emissions and prevent pollution.

Trainers will be provided with the capability to deliver skills for sustainability and the capacity to demonstrate a commitment to Education for Sustainability (EfS) principles.

Where possible, we will work with preferred suppliers and contractors who themselves have sound environmental practices, and when undertaking new developments we will minimise adverse environmental impacts.

Grant Radford
Chief Executive Officer
